JavaScript: String & Number

String

```
/*
str.length property
str.toUpperCase()
str.toLowerCase()
str.trim()
str.replace(first match of x, with y)
str.replaceAll(every match of x, with y)
str.concat(str1, str2, ...) sam as adding strings with +
str.split("seperator") // converts string to an array
str.split("")
str.split()
['this', 'is', 'a', 'book'].join(" ") // converts array to a string
str.includes("value")
str.startWith("value")
str.endWith("value")
str.split(" ").filter(s => s.length > 0).join(" ")
*/
```

Numbers

```
num.toFixed(DecimalPlaces)
Number(valueToConvertToNumber)
typeof price
num.toString()
parseInv(val) //return whole number
```

Random Numbers

```
Math.random()  // between >= 0 and <1
Math.random() * 10
```

```
Math.random() * 11
(Math.random() * (max - min + 1)) + min
```

```
console.log(randomMinMax(3, 9))
console.log(randomMinMax(30, 93))
console.log(randomMinMax(63, 125))
```

```
let randomMinMax = (min, max) => {
    return Math.floor(Math.random() * (max-min+1))+1;
}
```
